ENVIRONMENT AND SAVINGS
FRIENDLY
BAYMAK

With increasing environmental pollution and global warming, the tendency towards alternative energy sources is increasing and the increase in energy costs today puts emphasis on the proper use of energy and savings.

We not only protect the world we live in but also provide advantages with low energy costs with our environmentally friendly product technologies that do not lead to any environmental pollution.

BDR THERMEA GROUP

### **Description and Working Principle of the Heat Pump**

#### What is a Heat Pump?

Heat pumps are devices that transfer the heat taken from the environment to another environment with the external energy supplied from outside.

With heat pump products, it is possible to provide space heating, space cooling and pool water heating or cooling and obtain domestic hot water. Since heat pumps operate on the principle of reverse cooling cycle, the amount of energy consumed in the system is minimal.

#### **How Does a Heat Pump Operate?**

It operates based on the cooling cycle principle, which is also used in products such as refrigerators and air conditioners in our households.

The refrigerant with low temperature and pressure in the evaporator is evaporated by the energy transferred from the air.

In the compressor, the gaseous refrigerant is compressed and its temperature is increased along with its pressure. The refrigerant passing through the compressor reaches the condenser, since the temperature of the water at the condenser is lower, it transfers its heat to the heating system cycle with the help of a plate heat exchanger (condenser). The refrigerant cooled by the heat transfer occurring at this point condenses and goes back to the liquid phase. Afterwards, the pressure is reduced in the expansion valve and the low temperature refrigerant thus completes the cycle.

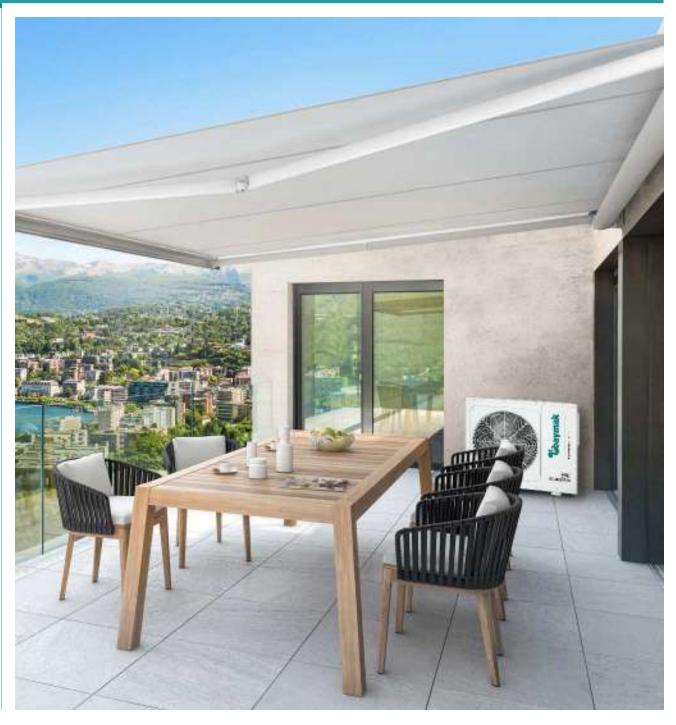

Always pioneering in energy efficiency, Baymak enables consumers and investors to save energy and make profits with its products that use energy properly.

Baymak brings you environmentally friendly, high efficiency technology by providing up to 80% energy saving with air source heat pump products.

BDR THERMEA GROUP

## **Advantages of Baymak Heat Pump**

- Heating and cooling is performed with a heat pump, and it is also possible to obtain domestic hot water with the addition of a boiler or thermoboiler.
- Unlike conventional heating devices, it provides high efficiency with the energy it receives from the ambient air (IO-MM 80 P model COP=5.19).
- It is possible to install a considerably more efficient system by using a PV system and Solar Collector together.
- Since there is no fossil fuel consumption, it does not emit gas, smoke and odour. No chimney is required.
- Due to the fact that it is powered by electricity, the risks associated with gas appliances are eliminated.
- CO<sup>+</sup> emission is only as much as the emission in electricity generation from the grid. With a PV support, this value can be reduced to significantly lower or even down to zero.

## **Baymak Heat Pump Family**

#### **Inverter Product Series**

10Therm Monoblock Type

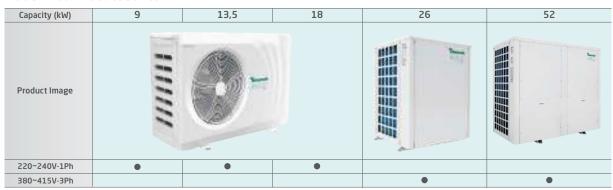

#### **IOTherm Split Type**

#### **BH-CM Hot Water Product Series**

#### **POOLX Pool Product Series**

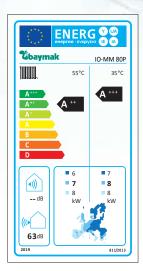

## **IOTHERM MONOBLOCK INVERTER**

**Heat Pump Systems** 

- High performance thanks to DC inverter technology and new R32 gas cooling efficiency
- High efficiency with A++++ energy efficiency class
- Compact design, 20% smaller\* than its counterparts (based on IO-MM 90)
- Cascade up to 6 devices
- Remote access via the Comfort Home application
- Options for use as needed (based on outlet water temperature and room temperature and with external room thermostat)
- Wide range of capacity
- Touch control panel with cables that can be used as a Room Thermostat
- High convenience of hot water with 65°C outlet water temperature
- Healthy and hot domestic water with weekly legionella programme
- Special operating modes (holiday mode, eco mode, silent mode, comfort mode, etc.)
- Eurovent certified

#### **Control Panel**

- New generation cabled control device
- Ability to use with 50 m signal cable (shielded cable)
- Ability to use the control panel of the device as a room thermostat
- Modbus protocol
- Separate power adapter

### **External Equipment**

**Buffer** Ensures more efficient operation of the system.

**In-Tank Heater Kit**Supports the system when capacity is limited.

**Boiler**Provides domestic hot water.

Circulation Pump
The external circulation pump
ensures the circulation of
water in the installation after
the buffer.

**BH 30A Heater Kit**Supports the system when capacity is limited.

**Expansion Tank**Absorbs thermal expansion in the system.

**Radiator** 

Room Thermostat

You can access your device anywhere\* with the **Comfort Home** application available for download on **Google Play** or the **App Store.** Switching the device on/off, temperature setting, zone setting and many other features can be controlled via the application.

The device, which can be activated remotely beforehand, provides time saving and convenience to the users.

\* The location of the control panel must have a 5G compatible modem, active Wi-Fi network and electricity.

## **HOT WATER**

Heat Pump Systems

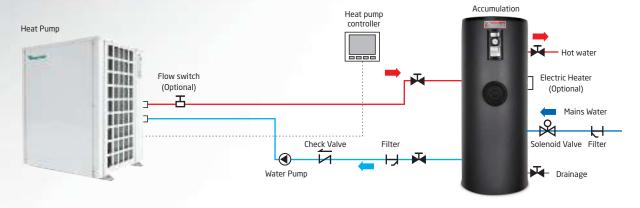

- Ability to use with mains water thanks to its specially designed heat exchanger
- Remote control with its Wi-Fi feature
- Ability to set 2 different programmes
- Hot water supply up to 60°C
- Easy operation
- LCD display screen
- Memory function against power outages
- Ability to display error codes on the screen, control of operation parameters

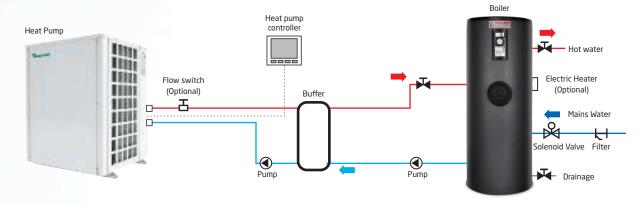

## **Installation Application Examples**

#### **Installation with Accumulation**

#### **Installation with Boiler**
